SELECTIVE ELIGIBILITY TEST (S.E.T.)

PRACTICE TEST 17

Mathematics

45 minutes

Instructions:

- This test contains 50 questions.
- Rough working can be done on the paper or on a separate sheet.
- For each question, choose the correct answer and then mark its letter on the separate answer sheet provided.

Your time will start when you turn over the page.

Q1. What is $22 - 4 \div 2$?

A 9

B 20

C 18

D 11

E 16

Q2. What is $(4 + 2)^2 + (4 - 2)^2$?

A 16

B 52

C 46

D 40

E 20

Q3. What is $501 - (253 - 42)$?

A 213

B 287

C 201

D 210

E 290

Q4. How many hundredths are there in 2.5?

A 2.05

B 25

C 250

D 2500

E 2.5

Q5. The volume of a cuboid is 128 cm^3.

The cuboid is cut in half to make two cubes.

What is the side length of one of the cubes?

A 4 cm

B 3 cm

C 2 cm

D 6 cm

E 8 cm

Q6. How many days were there in total in the 4 consecutive years 2018–2021?

A 1460

B 1461

C 1369

D 1437

E 1395

Q7. Egg boxes contain 12 eggs.

If every 18th egg is cracked when they are being packed, what is the probability I pick up an egg box which has a cracked egg inside?

A $\frac{2}{3}$

B $\frac{1}{3}$

C $\frac{1}{18}$

D $\frac{3}{2}$

E $\frac{1}{2}$

Q8. A triangle's angles are x, $x + 30°$ and $x + 60°$.

What is the size of the median angle?

A 60°

B 75°

C 80°

D 90°

E 100°

Q9. 110% of a number, N, is 638.

What is the value of N?

A 620

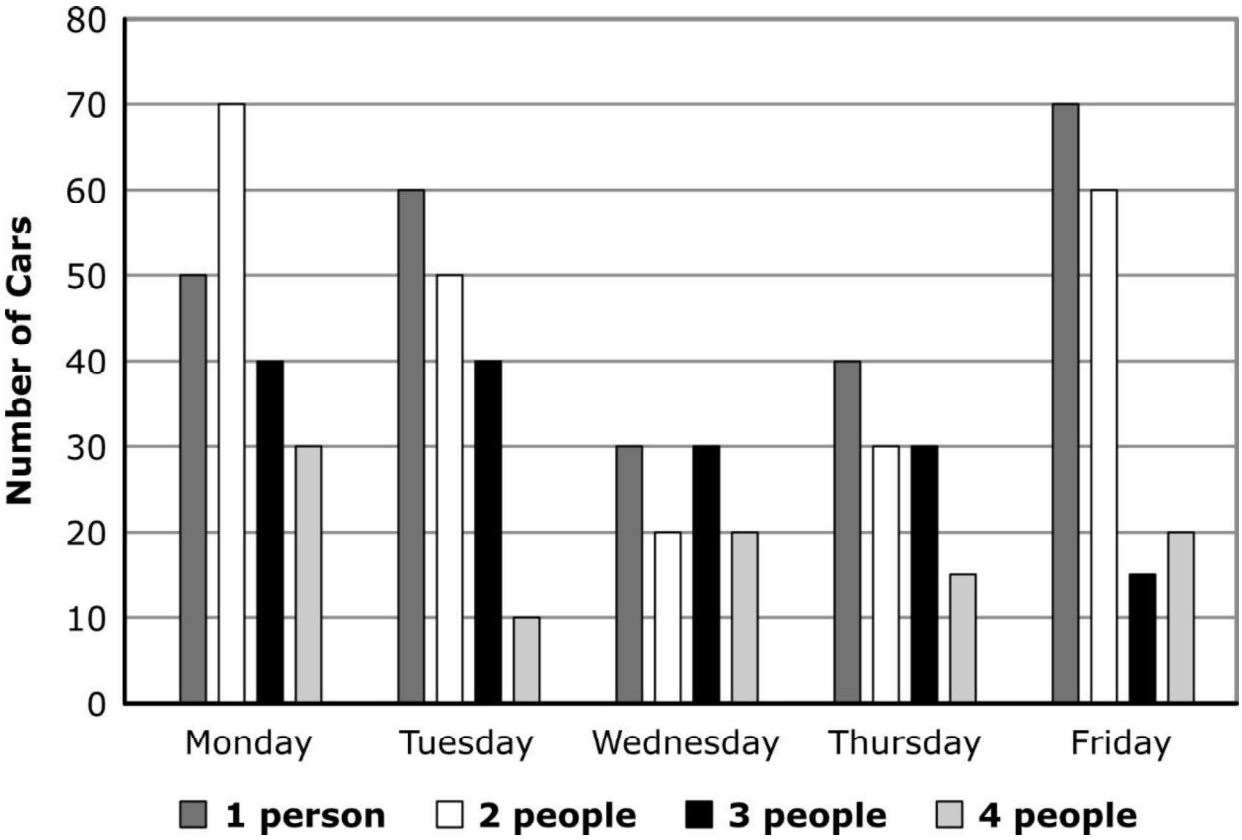

B 626

C 594

D 656

E 580

10. Sara counted the number of people that were in the cars that passed her house from 08:00 to 09:00 on Monday to Friday.

What percentage of the cars that passed from 08:00 to 09:00 on Tuesday contained 3 people?

A 15%

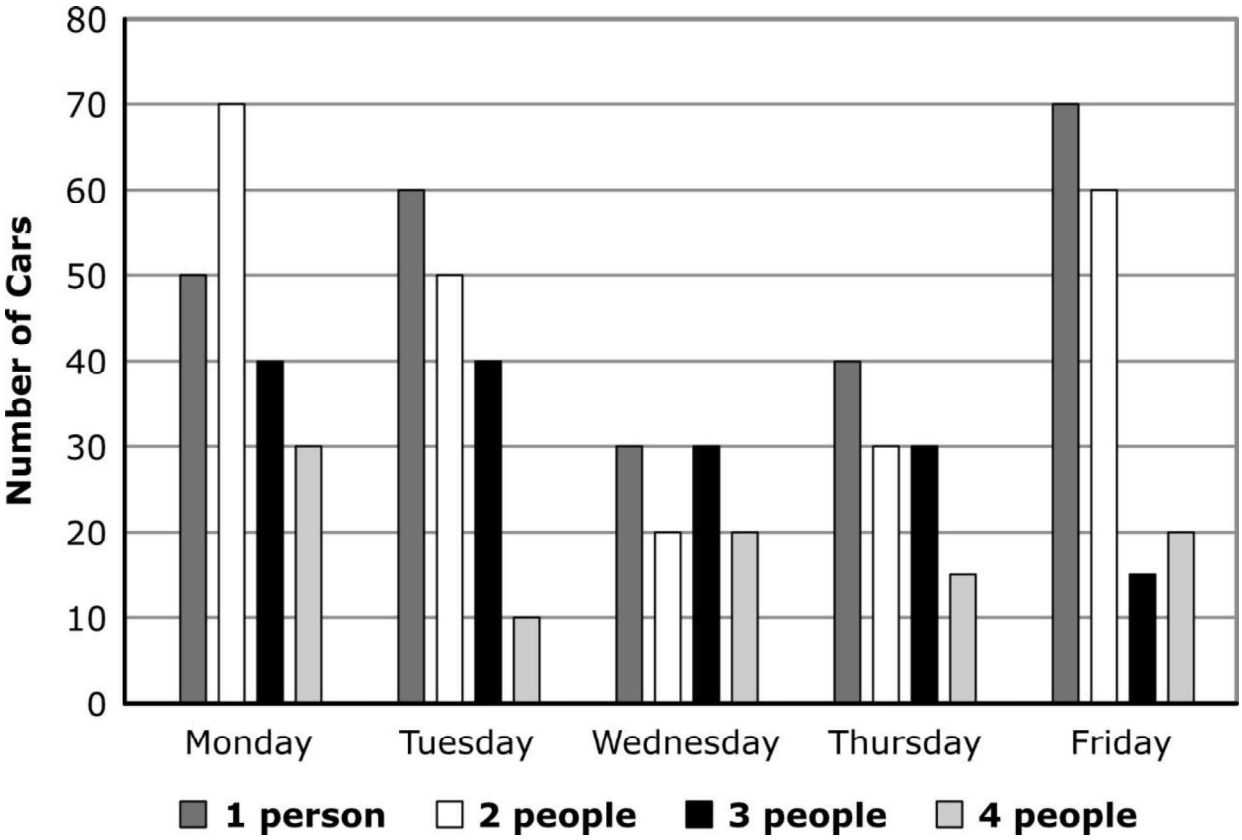

B 30%

C 25%

D 40%

E 20%

Q11. Sara counted the number of people that were in the cars that passed her house from 08:00 to 09:00 on Monday to Friday.

How many people in total were in the cars that passed her house from 08:00 to 09:00 on Wednesday?

A 240

B 250

C 280

D 300

E 320

Q12. Eight pickers can harvest four acres of land in two days.

How many pickers will be required to harvest ten acres of land in one day?

A 20

B 40

C 45

D 50

E 60

Q13. $5.4 \times 4\frac{1}{5} =$

A $22\frac{1}{25}$

B 22.5

C $22\frac{17}{25}$

D 22

E $22\frac{19}{25}$

Q14. $10y - 1 = 9y + 3$

What is the value of y?

A 4

B 6

C 2

D 3

E 5

Q15. 25 pupils in a class write with their right hand.

10 pupils write with their left hand.

8 of these pupils are counted twice as they can write with their right hand and left hand.

How many pupils are in the class?

A 29

B 35

C 43

D 24

E 27

Q16. What is one-twelfth of 20% of an hour?

A 60 seconds

B 2 minutes

C 5 minutes

D 10 seconds

E 1.5 minutes

Q17. What is the remainder when 19 is divided into 1120?

A 15

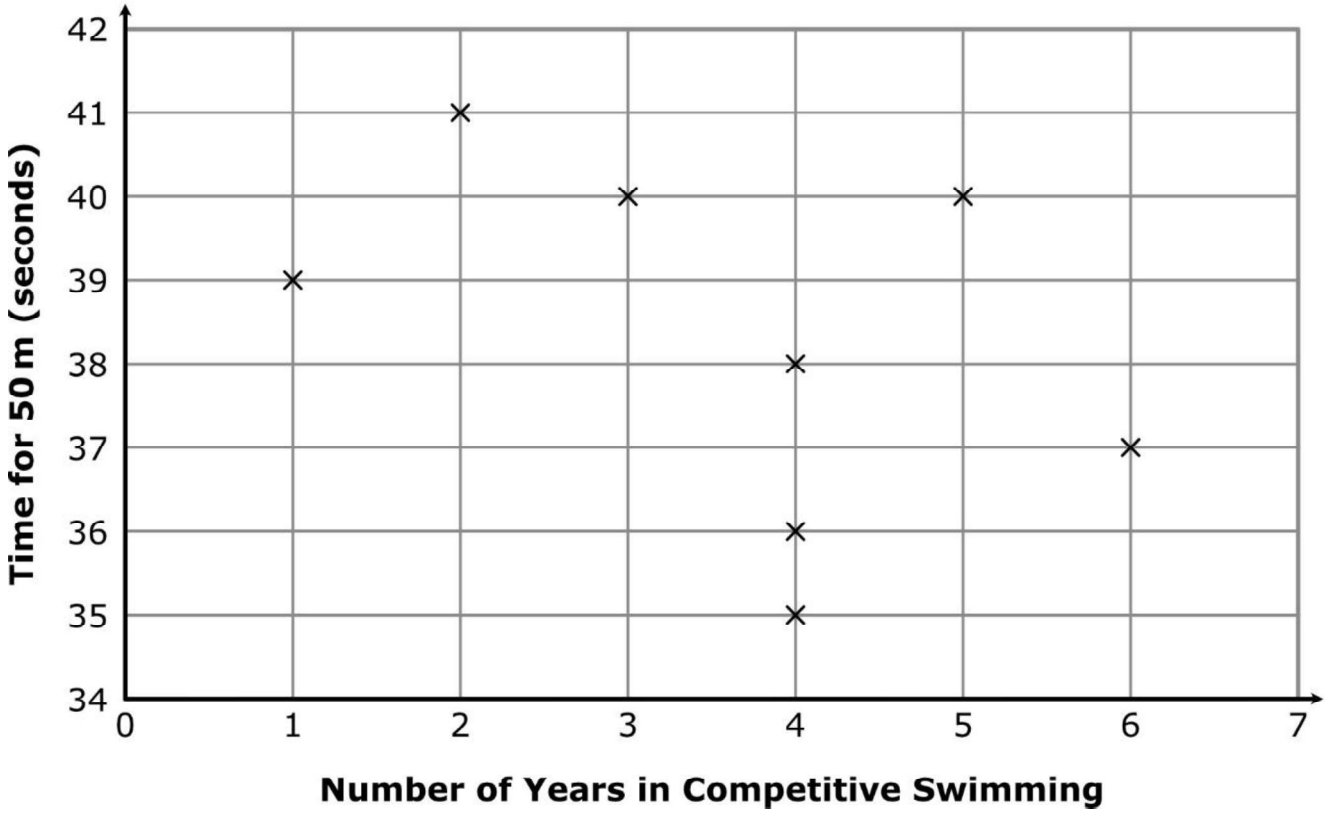

B 16

C 17

D 18

E 19

Q18. The scatter graph shows the time that participants in a race took to swim 50 m and the number of years for which they have been swimming competitively.

For how many years has the winner of the 50 m race been a competitive swimmer?

A 2 years

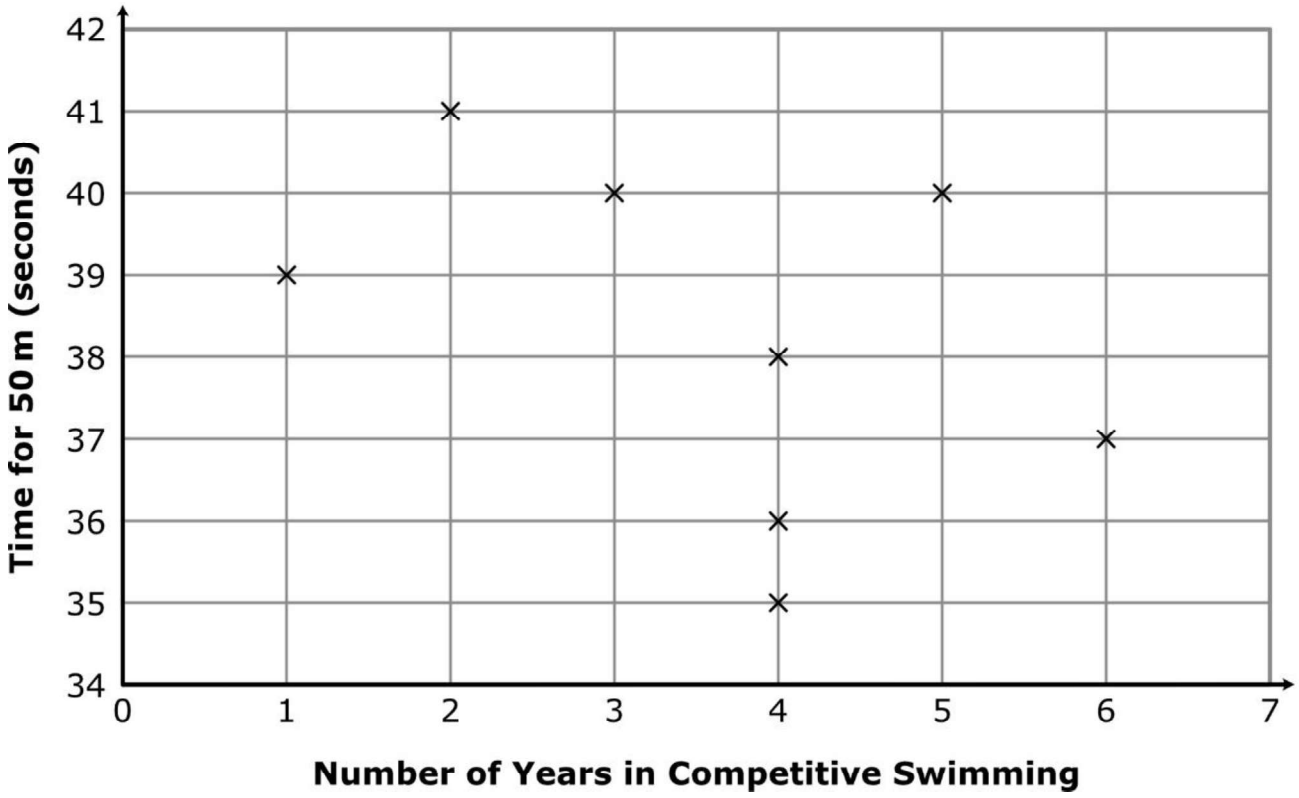

B 4 years

C 3 years

D 5 years

E 1 year

Q19. The scatter graph shows the time that participants in a race took to swim 50 m and the number of years for which they have been swimming competitively.

What was the mean time of the swimmers to the nearest second?

A 38 seconds

B 37 seconds

C 36 seconds

D 39 seconds

E 35 seconds

Q20. Which number comes next in the sequence?

1, 10, 11, 110, 111, 1110, ...

A 10101

B 11011

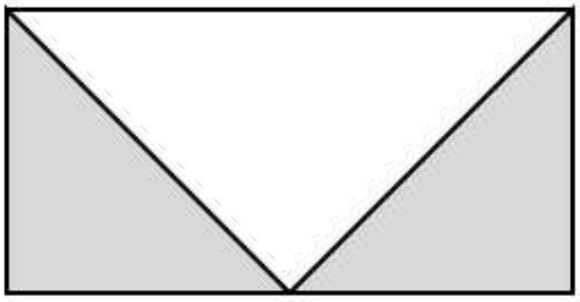

C 11111

D 1111

E 1112

Q21. Two shaded triangles are positioned in a rectangle.

The isosceles right-angled triangles each have an area of 2 cm^2.

What is the perimeter of the rectangle?

A 8 cm

B 10 cm

C 12 cm

D 14 cm

E 16 cm

Q22. I buy a house for £150 000, but it falls in value by 5% during the first year.

The value then increases by 8% during the 2nd year.

How much above the original price is the house worth at the end of the 2nd year?

A £3750

B £4200

C £3800

D £3900

E £4000

Q23. Two numbers add together to make 58 and their difference is 6.

What is their product?

A 1015

B 720

C 832

D 616

E 956

Q24. The table shows the length of time for which some empires lasted.

The empires are in alphabetical order.

Austrian Empire	1804 to 1867
Benin Empire	1440 to 1897
Dacian Empire	168 BC to 106
Dutch Empire	1568 to 1975
Egyptian Empire	1550 BC to 1077 BC

Which of these empires lasted the longest?

A Austrian Empire

B Benin Empire

C Dacian Empire

D Dutch Empire

E Egyptian Empire

Q25. When using a mobile phone abroad, texts cost 10 p, pictures cost 30 p and calls cost 20 p.

Whilst on holiday, Mr Flear sent 27 texts and 5 pictures and made 200 calls.

What was the total cost of those communications?

A £48.60

B £44.20

C £42

D £7.90

E £8.20

Q26. Mina and Mona play 2 games of chess.

They play for a total of 2.25 hours.

The 1st game lasts 25 minutes longer than the 2nd game.

For how long does the 2nd game last?

A 1 hour and 5 minutes

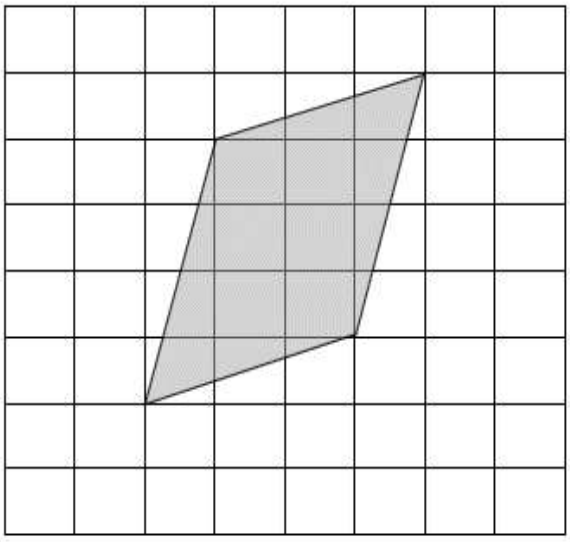

B 45 minutes

C 1 hour

D 50 minutes

E 55 minutes

Q27. What fraction of the diagram is shaded?

A $\frac{11}{64}$

B $\frac{2}{13}$

C $\frac{1}{8}$

D $\frac{3}{16}$

E $\frac{5}{16}$

Q28. How long is 1.2 hours in hours and minutes?

A 1 hour and 12 minutes

B 1 hour and 2 minutes

C 1 hour and 20 minutes

D 1 hour and 10 minutes

E 1 hour and 9 minutes

Q29. What is the nth term of the sequence?

2, 4, 8, 16, 32, 64, ...

A $2n$

B $n + 2n$

C $5n^2$

D 2^n

E $(-2)^n$

Q30. What is $0.7^2 \div 10 + 1.02 \times 0.05$?

A 1

B 1.4

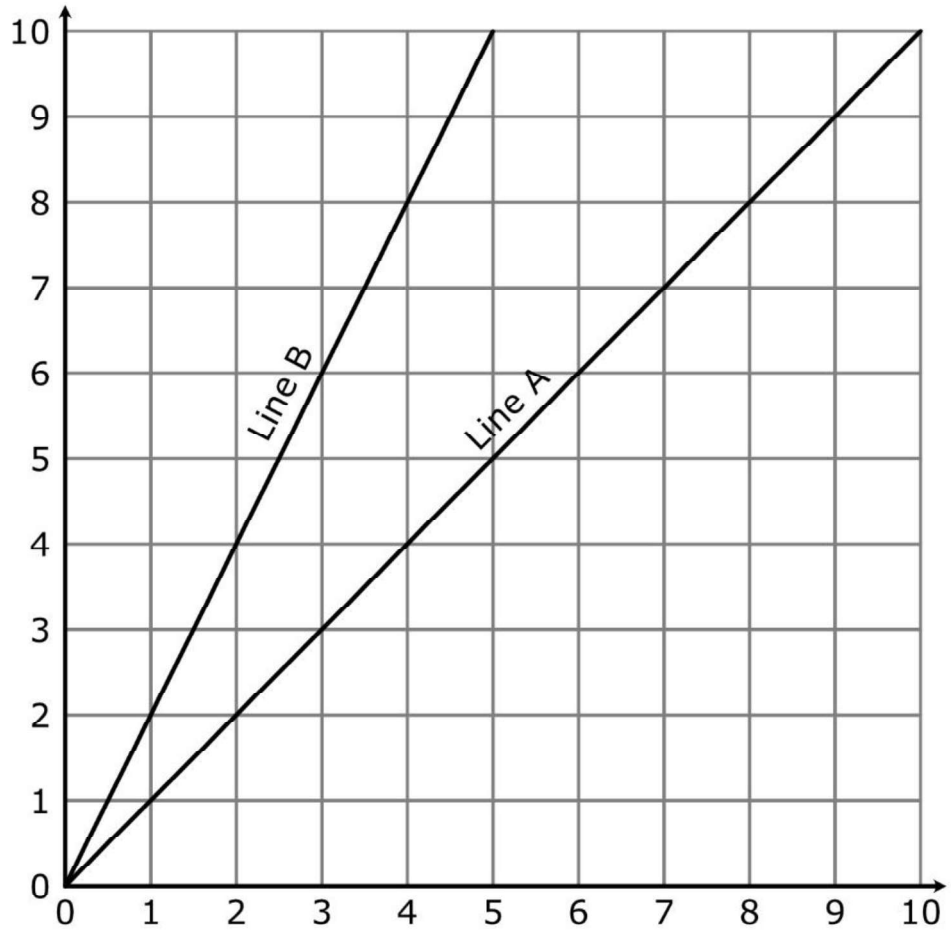

C 0.1

D 0.15

E 0.2

Q31. The gradient of a line is a measure of how steep it is.

The gradient of a line is found by looking at two points on a line and calculating the change (difference) in the y-coordinates divided by the change in the x-coordinates.

For example, take the two points (6, 6) and (0, 0) on Line A.

The gradient is (6 – 0) ÷ (6 – 0) = 1

What is the gradient of Line B?

A 0.5

B 1

C 2

D 4

E 6

Q32. A film lasts for 2 hours and 20 minutes.

It is three-quarters of the way through at 15:35.

At what time did the film start?

A 13:10

B 14:20

C 13:45

D 13:50

E 14:00

Q33. $\frac{5}{6} \div \frac{1}{5} =$

A $\frac{1}{5}$

B $4\frac{1}{6}$

C $\frac{2}{5}$

D $\frac{1}{6}$

E $5\frac{1}{5}$

Q34. Which one of the following is **NOT** divisible by 9?

A 123456789

B 987654321

C 987456321

D 897456312

E 987406321

Q35. A triangle has coordinates (1, 4), (5, 4) and (3, 2).

It is reflected in the y-axis.

What are the new coordinates?

A (-5, 4), (-1, 4) and (-3, 2)

B (-5, -4), (-1, -4) and (-3, -2)

C (5, -4), (1, -4) and (3, -2)

D (-5, 4), (1, -4) and (-3, 2)

E (-5, 4), (-1, 4) and (3, -2)

Q36. A 5 p coin weighs 3.25 g.

A 10 p coin weighs 6.5 g

How many times heavier will a bag of £x of 10 p pieces be than a bag of £x of 5 p pieces?

A 2 times

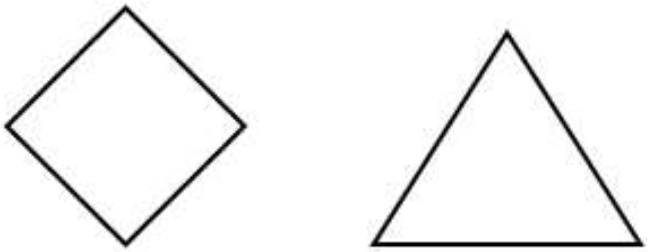

B 4 times

C the same weight

D half the weight

E 8 times

Q37. A square (rotated 45°) and an equilateral triangle are shown.

How many degrees clockwise would the triangle have to be rotated before the shapes had at least one parallel edge?

A 25°

B 10°

C 5°

D 15°

E 20°

Q38. What is the difference if you add 43.127 and 27.146 and then round the answer to 2 d.p. compared to if you round both numbers to 2 d.p. first and then add them?

A 3 hundredths

B 1 hundredth

C 7 tenths

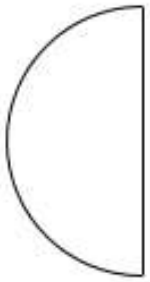

D 2 hundredths

E 2 thousandths

Q39. The radius of a semicircle is 2 cm.

The perimeter of the semicircle is $(2\pi + 4)$ cm.

What is the perimeter of the complete circle?

A 6π

B 3π

C 4

D 4π

E 2.5

Q40. Simon says:

"My number is 3 greater than Simone's number.

When we both square our numbers, Simone's answer is 57 less than my answer."

What was Simon's original number?

A 11

B 10

C 9

D 8

E 7

Q41. Rachel says, "Dividing my number by 4 is the same as subtracting 12 from it."

What is Rachel's number?

A 2

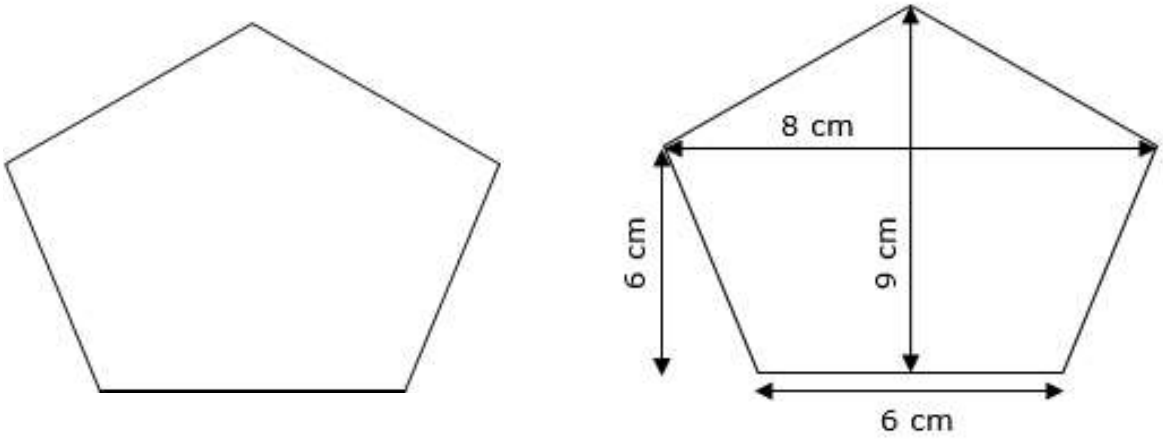

B 3

C 4

D 16

E 6

Q42. The diagram shows an irregular pentagon that has a vertical line of symmetry.

What is the area of the pentagon?

A 64 cm^2

B 60 cm^2

C 54 cm^2

D 50 cm^2

E 48 cm^2

Q43. (-1, 0) and (1, 0) are two points that are joined by a straight line.

Another line is drawn with endpoints (-1, -1) and (1, 1).

At what point do the two lines cross?

A at the origin

B (0, 1)

C (0, -1)

D (0.5, -1)

E (1, 0.5)

Q44. Tom adds together all the prime numbers less than 10 and all the 2-digit cube numbers.

What is Tom's total?

A 109

B 105

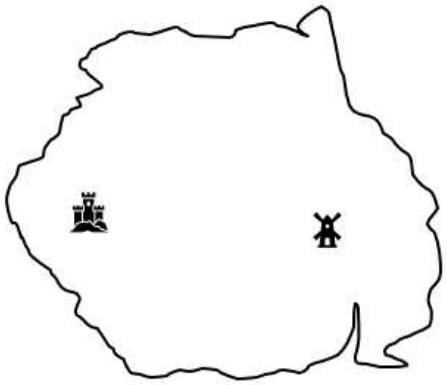

C 108

D 126

E 114

Q45. The map has a scale of 1 : 200 000.

If the distance between the castle and windmill is 2 cm on the map, what is the distance between them in real life?

A 40 cm

B 4 km

C 400 mm

D 40 km

E 40 m

Q46. Which of the following values is the range of the five values?

$\left(\frac{1}{3}\right)^2$ $\quad \frac{1}{12}+\frac{1}{3}$ $\quad \frac{1}{6}\times 2$ $\quad \frac{1}{6}\times 1.5$ $\quad \left(\frac{2}{3}\right)^2$

A $\left(\frac{1}{3}\right)^2$

B $\frac{1}{12}+\frac{1}{3}$

C $\frac{1}{6}\times 2$

D $\frac{1}{3}\times 1.5$

E $\left(\frac{2}{3}\right)^2$

Q47. $25 \times 678 + 74 \times 678 =$

A 67800 + 678

B 98 × 678 + 1256

C 99 × 876

D 987654

E 67800 – 678

Q48. Mr Trek sets off on a journey.

He travels for 20 km on a B road, which takes 30 minutes.

Then Mr Trek takes a motorway for the rest of his journey, on which he completes a further 80 km in 45 minutes.

What is Mr Trek's average speed for the whole journey?

A 75 km/h

B 80 km/h

C 85 km/h

D 90 km/h

E 96 km/h

Q49. Given that $\frac{7}{8} = 0.875$ and $\frac{3}{32} = 0.09375$, what is the value of $\frac{31}{32}$?

A 0.968

B 0.86875

C 0.94275

D 0.8765

E 0.96875

Q50. Using the date form 1.1.2020, how many days in 2020 would have dates consisting only of 0s, 1s and/or 2s?

A 52

B 40

C 28

D 32

E 96

End of Test

SELECTIVE ELIGIBILITY TEST (S.E.T.)

PRACTICE TEST 17

English

50 minutes

Instructions:

- This test contains 34 questions, which are split over 4 sections
- You are advised to spend the time suggested below on each section:
  Section A: Spelling – 5 minutes
  Section B: Text 1 – 25 minutes
  Section C: Text 2 – 10 minutes
  Section D: Comparison of Texts 1 & 2 – 10 minutes
- These timings are just recommendations – you are allowed to spend as much of the given time as you like on each section, and you may return to questions at any time during the test.
- Read the instructions for each section carefully.
- Mark all your responses on the separate answer sheet provided.

Your time will start when you turn over the page.

Section A

Which of these is the correct spelling?

1.
A Calender
B Calandar
C Callander
D Calander
E Calendar

2.
A Embarrassment
B Embarassment
C Embarrasment
D Embarasment
E Embarrissment

3.
A Indapendent
B Indapendant
C Independent
D Indeppendant
E Indeependent

4.
A Misschievous
B Mischievous
C Mischievious
D Mischiefious
E Misschievious

5.

A Refered

B Reffered

C Refferred

D Referred

E Refurred

6.

A Vehical

B Vehicle

C Vehicule

D Vehicul

E Veercal

Section B

The extract below is from *Undercover Robot: My First Year as a Human,* by David Edmonds and Bertie Fraser.

Read the extract carefully and then answer the questions that follow.

As I passed through the school gate, I glanced back at the human who flicked the switch that brought me to "life". I call him "Dad" and he had just taken 13 pictures of me, before hugging me and wishing me luck for my first day at school.

Dad is 184 centimetres tall, with thick, curly hair that was once brown but is now 63% grey. His bright blue eyes are often wide open, which, according to my database of expressions, typically indicates anger or being startled. But because I have been in the lab with him for many hours, I know that he is generally calm. On average, he loses his temper once every 32 hours, which is infrequent for a human. People say he is untidy. He wears crumpled shirts and scuffed size-10 shoes. He is happiest when sitting in a chair and reading books with long titles while snacking on malted chocolate biscuits.

Dad is a professor of philosophy. Philosophers work on problems that baffle human minds. In his youth he spent 2 years considering the difference between a mug and a cup. Then he spent another 3 years wondering whether things like mugs and cups really exist.

Nowadays, he leads a cross-faculty research team that includes specialists in software, electronics, plastics, psychology, linguistics, medicine and many other fields. He brought them all together to work on a project that will change the world.

That project is me.

When the school term started, 18 months after I spoke my first word in the lab, the project *really* began. I found myself alone in the "real" world for the first time – surrounded by human kids that I did not know.

And even more importantly, none of them knew anything about me.

My mission for my first day at school was to score 35 Friendship Points. Friendship is one of my most important sub-goals. I need to interact with humans to improve my social skills. Whenever I meet somebody, I log a report on:

1) eye-contact (number of minutes/seconds)
2) conversation (number of minutes/seconds)
3) Friendship Points (positive or negative rating)

The complex algorithm used to calculate Friendship Points is based on voice-tone, expression and language. The more friendly people are towards me, the more points I score. My main goal is that no human I meet should so much as suspect that I am not one of them. Friendly interaction shows that I am succeeding.

I had only been at school for 9 minutes and 16 seconds when my alarm rating rose from 30% to 62%. The cause of this alert was a boy with a moonish face who was peering at me through gold-rimmed glasses. At first, I took this as a positive sign. After 73 seconds of continuous staring, I re-evaluated the situation. Had he noticed something odd about me? Did I look different from the other kids in the assembly hall? I decided on my response. I casually picked a silicone bogey from my nose and flicked it onto the floor – according to my database, this action is typically human. The boy looked away, and my alarm rating gently began to fall.

I scanned my fellow students. They formed a group known as "Year 7" in the British school system, and most of them were 11 years old. Like me, they were starting secondary school. A boy took a clunky, brick-shaped phone out of his jacket pocket and turned it to silent mode. A girl with dyed hair furtively removed some gum from her mouth and dropped it onto the floor. I noticed another girl wearing pale foundation make-up and red lipstick. Had she not read the school rules on the website?

Rule 18.1: Make-up is not permitted in Years 7–9 (no exceptions)

My sensors detected sweat in the air – and some human gases. *Ewww!* The rules did not state that these fumes must not be let out on school premises, but perhaps they should have; the emissions in the assembly hall were hovering near "Disgust" levels. As for me, my makers had not yet given me a gassy release function – it was scheduled in my 2.3X update, due in October.

While I was still scrutinizing the other newbies, a man came onto the stage and tapped the microphone. Who was he? He fitted my template for a teacher: he was grown-up and wearing a cheap suit and shapeless brown shoes. He then announced that he was the Deputy Head. Well how about that? It was our first day at school and they sent a deputy! The top teacher could not be bothered to show up. The loser who came in his place told us he was called Mr Second, which is thoroughly appropriate, given that he was second-in-charge. It is funny how humans so often have fitting names. In fact, I had almost been given one too.

The team that created me was supposed to be made up of the most brilliant minds in the university. And what did they want to call me? Wait for it – Roberta! Roberta the Robot!

"There is no way I am starting my existence with a lame name like that," I told them.

"So what would you like to be called?" they asked.

I ran through a few hundred names that I found online and picked one. "Dotty" – short for Dorothy.

"I am definitely a Dotty," I said. "Yes, Dotty is the name for me. According to the data I have just analysed, the name is cute and a bit dippy, which matches the personality you have programmed for me."

7. Why are some words in the text set in quotation marks?

Select all that are correct.

A To show that they are the exact words that someone spoke

B To show that they are a translation of the preceding phrase

C To show the given title or name of something or someone

D To show that the word is being used in an unusual or inaccurate way

E To show that the author does not like the word

8. Think about what can be inferred from the opening paragraph (lines 1–3).

Which of these is NOT correct?

Select **one** answer.

A The narrator is not human.

B The narrator is an electronic device.

C The narrator has not been to school before today.

D Dad thinks that the narrator is human.

E Dad is proud of the narrator.

9. From the text, what do wide open eyes usually indicate?

Select all that are correct.

A Rage

B Delight

C Sudden shock

D Serenity

E Confusion

10. What does Dad look like?

Pick the **most accurate** explanation.

A Tall and smartly dressed with luxuriant, curly, brown hair

B Tall with dense, greying hair and a dishevelled appearance

C Average height and grubby with long, frizzy hair

D Short with bushy, grey hair and shabby-looking clothes

E Short with curly, brown hair and piercing blue eyes

11. Think about the way in which the narrator describes Dad.

Which of these is NOT correct?

Select **one** answer.

A His height is given to the nearest centimetre.

B The appearance of his eyes is given, not just the colour.

C The colour of his hair is analysed mathematically.

D His demeanour is accurately assessed by referring to a database.

E His shoe size is stated.

12. What can we infer about Dad from lines 9–10?

Select all that are correct.

A He enjoys reading.

B He is lazy.

C He is not concerned about how he looks.

D He does not like plain biscuits.

E He reads books on complicated subjects.

13. Look at lines 11–13 carefully. Which of these is NOT correct?

Select **one** answer.

A Dad is self-deprecating.

B Philosophy is concerned with the ideas of reality and existence.

C Philosophy is concerned with language and reason.

D Some philosophical ideas can be very hard to grasp.

E Dad is blasé about philosophy.

14. What does 'cross-faculty' (line 14) mean?

Pick the **most accurate** explanation.

A Angry teaching staff

B Opposing mental powers

C Two intersecting disciplines

D Bridging different levels of ability

E An amalgam of different university departments

15. Think about what we learn in lines 17–21. Which of these is NOT correct?

Select **one** answer.

A The narrator is the subject of a research project.

B The narrator only started speaking a year and a half ago.

C Attending school is an important part of the ongoing research.

D The narrator got separated from Dad on the way to school.

E The other pupils will not be told about the research project.

16. What are the objectives of attending school for the narrator?

Select all that are correct.

A To acquire the exam results needed to go to university

B To develop their social skills so they can pass as a human

C To successfully engage in cordial interactions

D To hone their journalism skills

E To avoid arousing any suspicion amongst the school pupils and staff

17. Look carefully at lines 32–39. Which of these is NOT correct?

Select **one** answer.

A A boy with a round face and spectacles was staring at the narrator.

B The narrator at first thought the boy was being hostile.

C The boy watched the narrator for over a minute.

D The author uses rhetorical questions to show the narrator's concerns.

E The narrator has access to a database of human expressions and behaviours.

18. How does the author maintain the idea that the narrator is a robot throughout the text?

Select all that are correct.

A Repeated use of the word 'human' emphasises that the narrator is not human.

B The narrator is always objective and unemotional.

C The narrator's observations and descriptions are often analytical.

D The narrator speaks in a stilted and unnatural way.

E The narrator uses technical terms associated with computers and electronics, such as 'database', 'algorithm' and 'sensors'.

19. 'He fitted my template for a teacher' (line 53)

Think about why the use of this template might cause problems for the narrator in future. Which of these is NOT correct?

Select **one** answer.

A Not all people who wear shapeless shoes are teachers.

B Not all teachers are adults.

C Not all people who wear cheap suits are teachers.

D Not all teachers wear cheap suits.

E Not all teachers wear shapeless shoes.

20. Select the **TWO** most accurate words to describe the personality that the narrator has been programmed with.

A Pedantic

B Endearing

C Cynical

D Aloof

E Scatterbrained

21. Select the **TWO** words that are synonyms of 'lame' as it is used in line 62.

A Limping

B Dull

C Uninspiring

D Defective

E Thin

22. Think about what can be inferred from lines 60–61. Which of these is NOT correct?

Select **one** answer.

A The members of the research team are the university's foremost experts.

B The narrator is disappointed by the team's lack of imagination.

C The narrator thinks that Roberta is an uninspired choice.

D The narrator thinks that the name Roberta is too common.

E The narrator is a robot.

23. '"the name is cute and a bit dippy, which matches the personality you have programmed for me."' (lines 67–68)

Think about how the narrator is portrayed through the extract. Which parts are at odds with the programmed personality?

Select all that are correct.

A She is disparaging of the Deputy Head, calling him a 'loser'.

B She thinks it is funny how people often have fitting names.

C She picks her nose.

D She is analytical and logical.

E She is a stickler for rules.

Section C

The extract below is taken from *Autopia: The Future of Cars,* by Jon Bentley

Read the extract carefully and then answer the questions that follow.

If you thought the hardware was complicated, the software needed to make self-driving cars an everyday reality is hundreds of times more brain-defyingly baffling. This is possibly the greatest test of artificial intelligence the world has ever seen.

The idea is the car takes the various bits of information from all the sensors, and combines them to determine where it is, exactly what surrounds it and how those surroundings will change – and then plots a course of action through the space. This all has to be done within milliseconds and to unfailingly high levels of accuracy.

The car uses a technology called deep learning. I'm oversimplifying, but essentially the on-board computer turns all the information from the sensors into a vast matrix containing billions of bits of digital information. It then searches for known patterns within the data, which it can use to select the right behaviours. This is sometimes termed a neural network. Once patterns and necessary behaviours are detected and decided upon, this is translated into physical form through the accelerator, brakes and steering, as well as by using other systems like the lights and even the horn.

In short, the car operates by detecting patterns in data and responding to them. It's the same sort of technology that's helped to predict things ranging from earthquakes to heart disease and has developed the capacity to analyse cancer scans, identify eye disease and muscle damage – all more quickly and accurately than human doctors. It's also proved very useful, if not creepily disturbing, in facial recognition. Episodes like the recording of biometric information about concert-goers when they snap themselves in selfie booths and people being mistakenly arrested for shoplifting merely because they share similar features with criminals have brought facial recognition into some disrepute, and show how deep learning can fall short.

Identifying patterns on the road is far more demanding in terms of the variety of things that need to be recognised and the short time available to do so. Creating software that then knows how to respond to these perceived environments is even more of a nightmare. The most obvious way the car is taught how to behave is through 'behavioural cloning' – accumulating data from how (decent) human drivers behave. Then the system can practice and learn, improving its own driving as it gets better at making decisions itself, while being watched by a real driver in case things go wrong — which they will.

At its most basic, a system might recognise an open road from vast experience of seeing pictures of a clear road ahead, translating that into an action to accelerate up to a

predetermined speed limit. At the more challenging end of the scale, it has to cope with a busy, previously un-tackled junction, packed with other cars, trucks, pedestrians and cyclists. It has to predict how they're all going to behave and respond accordingly.

Sebastian Thrun thinks accurate perception is the most difficult challenge. In the early days of Google's autonomous vehicle project, he recalls, 'our perception module could not distinguish a plastic bag from a flying child'.

24. Which words best describe the type of text that this extract is taken from?

Select all that are correct.

A Science fiction

B Non-fiction

C Informative

D Technical

E Autobiographical

25. Select the **TWO** most accurate words to describe the narrator's attitude.

A Fascinated

B Puzzled

C Enthusiastic

D Dismissive

E Mocking

26. Think about the style of the text. Which of these is NOT true?

Select **one** answer.

A It is written in the first person.

B The narrator acknowledges the reader.

C The text is mainly written in the past tense.

D The narrator is clearly knowledgeable on the subject.

E The narrator explains difficult concepts in Everyman terms.

27. Which of the following phrases are technical terms (as opposed to the narrator's own words)?

Select all that are correct.

A 'brain-defyingly baffling' (line 2)

B 'vast matrix' (line 9)

C 'deep learning' (line 8)

D 'neural network' (line 12)

E 'behavioural cloning' (line 28)

28. Think about how a self-driving car works. Which of these is NOT correct?

Select **one** answer.

A The car gathers information about its surroundings through sensors.

B The car's computer digitises information from the sensors.

C The computer searches the digital information for recognised patterns.

D The computer selects a response based in the patterns detected.

E The computer instructs a robot to carry out the required response.

29. From the text, what other systems use similar technology to that required in a self-driving car?

Select all that are correct.

A Medical imaging analysis

B Earthquake forecasting

C Satellite navigation

D Automatic braking

E Facial recognition

30. Think about the capabilities and limitations of the technology described. Which of these is NOT correct?

Select **one** answer.

A It can find patterns in data more quickly and accurately than a human.

B It initiates a response based on a recognised pattern.

C It cannot always make the same distinctions that a human can.

D It relies on established patterns and learnt information.

E It will always respond appropriately.

Section D

Answer the following questions using BOTH extracts.

31. Think about Dotty and self-driving cars. Which of the following is true about BOTH?

Select all that are correct.

A They gather and record information.

B They are fitted with sensors.

C They are self-aware.

D They make decisions based on the data available to them.

E Their systems are constantly learning and improving.

32. Think about Dotty and self-driving cars. Which of the following are potential problems for BOTH?

Select all that are correct.

A Someone may realise that they are not human.

B The data they have access to may not cover a certain situation.

C They could seriously injure or kill someone if they respond to a situation inappropriately.

D They may respond inappropriately due to limitations in the data available to them.

E There is the potential for them to learn inappropriate behaviours as well as appropriate ones.

33. Think about the challenges that BOTH Dotty and self-driving cars face. Which of these is NOT correct?

Select **one** answer.

A Human behaviour is impossible to accurately predict all of the time.

B Human perception and behaviour is very difficult to imitate accurately.

C Behaving and looking like a human is essential to success.

D An infinite combination of variables can come into play in a certain situation.

E It may never be possible for them to gain truly accurate perception of a situation.

34. 'Then the system can practice and learn, improving its own driving as it gets better at making decisions itself, while being watched by a real driver in case things go wrong — which they will.' (Extract 2, lines 29–31)

Apply this idea to Dotty's situation and consider what is likely to happen later in the book. Which of these is NOT correct?

Select **one** answer.

A Dotty will get better at interpreting human behaviour.

B Dotty will get better at responding appropriately in interactions.

C There will be situations that Dotty is not prepared for.

D Someone will realise that Dotty is not human because her behaviour is too perfect.

E Dotty will make mistakes, which will probably have humorous consequences.

11+ S.E.T. Practice Test 17 – English – Answers

Marking Guidance

For each question, the maximum number of marks available is shown.

Where questions require multiple answers and use the rubric, '**Select all that are correct**', negative marking should also be applied, whereby 1 mark is deducted for each incorrect answer selected down to 0 marks (note that the number of marks per question cannot be negative).

For example:

If a question is worth 2 marks and requires options A, B and C to be selected:

Award 2 marks for A, B **and** C selected or 1 mark for any two correct answers selected.

Award 1 mark for A, B, C **and** D **or** E selected (2 marks – 1 incorrect = 1 mark).

Award 0 marks for A, B, C, D **and** E selected (2 marks – 2 incorrect = 0 marks).

Award 0 marks for A, B and E selected or equivalent (1 mark – 1 incorrect = 0 marks).

1.	E	[1 mark]
2.	A	[1 mark]
3.	C	[1 mark]
4.	B	[1 mark]
5.	D	[1 mark]
6.	B	[1 mark]
7.	A, C and D	[2 marks]
8.	D	[1 mark]
9.	A and C	[2 marks]
10.	B	[1 mark]
11.	D	[1 mark]
12.	A, C and E	[2 marks]
13.	E	[1 mark]
14.	E	[1 mark]
15.	D	[1 mark]
16.	B, C and E	[2 marks]
17.	B	[1 mark]
18.	A, C and E	[2 marks]
19.	B	[1 mark]

20.	B and E (both answers must be correct)	[1 mark]
21.	B and C (both answers must be correct)	[1 mark]
22.	D	[1 mark]
23.	A, C, D and E	[3 marks]
24.	B, C and D	[2 marks]
25.	A and C (both answers must be correct)	[1 mark]
26.	C	[1 mark]
27.	C, D and E	[2 marks]
28.	E	[1 mark]
29.	A, B and E	[2 marks]
30.	E	[1 mark]
31.	A, B, D and E	[3 marks]
32.	B, D and E	[2 marks]
33.	C	[1 mark]
34.	D	[1 mark]

Total: **47 marks**
